## Natural & Snapped Step / Treads

Take height of incline in inches divided by thickness of step / tread to get correct number of step treads needed for specific job; note that less incline (% of slope) requires deeper bed depth for step treads.

**Example:** A slope (hill) which is 72 inches high (6 feet) would require 12 pieces of 6" step/ treads  
(72 inches divided by 6 inches = 12 pieces)

*Coverage may vary depending on field conditions & depth of stone used*
